

MAINTENANCE OF THE SMOKED OAK TABLE

CONGRATULATION / You are now the lucky owner of a MUUBS X SAYS WHO table in smoked oak. The smoked oak has a beautiful dark colour, which goes 2-3 millimeters into the table. Before using the table, please read this guide to ensure a saturated, smooth and rugged table top.

BEFORE USING THE TABLE / Before first time use it is recommended to oil the table with Guardian Black Pigmented Oil, and to follow their instructions for oiling. Please note, it is important to oil the table on both sides the first time - to saturate the table, and avoid the table top to curve. The table has been oiled once during production, but this is not enough to optimally saturate the surface.

DAILY MAINTENANCE / Use a lint free cloth and wipe immediately after spills. Never use strong soap/cleaning products as this will dissolve and remove the protective oil from the surface. For deep cleaning we recommend to use Guardian Wood Cleaner.

ONGOING MAINTENANCE / The effect of oiling is decreasing continuously, and therefore it is recommended to oil the table several times a year. You should approx. treat the table 3-4 times a year or as needed. The first half year after the purchase it is recommended to treat the table with oil once a month.

WHY IS CORRECT MAINTENANCE IMPORTANT? / Solid wood is a living material. Variations in humidity, temperature differences and dry heat from wood stoves can cause the table top to become rough and easily curved. However, this is of no importance. In the summer months, the tree is expanding, and the table top can be easily curved. During the winter, the tree pulls together, and the tree that curved in summer will recede. There may be "windscreens" (small cracks between the veins) which are of no importance. With the right care and maintenance, the above changes will be minimized.

You are now trained to care and maintain your smoked oak table. For questions, please contact MUUBS.
